VALUE ADDED COURSE ON MARINE BIOLOGY	AOCZ0012 3	25.08.2022 - 29.09.2022	DEPARTMENT OF ZOOLOGY	G. KRUPA JAYASRI	III B.Sc. (CBZ)	P DURGA GANESH	20901
						B ANUSHASRI	20902
						L NIHARIKA	20904
						P DEEPIKA	20905
						N CHANDRAKALA	20906
						DUHITAJEE DAYAN MANGALAGIRI	20907
						SIRI SATHWIKA MUPPIDI	20909
						D VENNELA	20910
						K DURGA BHAVANI	20911
						M SWAPNA	20912
						G BHANU PRASAD	20913
						Y VENKATA LAKSHMI KALYANI	20914
						SD ABDUL JABBAR SHOHAIB	20915
						T PAVANI	20916
						K SPANDANA	20917
						R HEMANTH KUMAR	20919
						CARR PREETHI	20920
						R SANGEETHA	20922
						K ANJALI	20924
						J SUDHA RANI	20925
						R YESU RAJU	20926
						I CHANDRIKA NAGA RAVALI	20927
						G LEELA RANI	20928
						K SAI RAMYA SRI	20929
K MOUNIKA	20931						
J PRADEEP KUMAR	20932						
P SAI VYSHNAVI	20933						
D DHANA LAKSHMI	20934						
B GNANESHWAR	20936						

						G KOUSALYA LAKSHMI PRASANNA	20938
						N LIKITHA SAI LAKSHMI DURGA	20940
						K SAI TEJA	20941
						E MAHENDRA BABU	20943
						M SALMAN RAJU	20944
VALUE ADDED COURSE ON ORNITHOLOGY	AOCZ0012 4	07.10.2022 - 14.11.2022	DEPARTMENT OF ZOOLOGY	M. SAHITHI	II B.Sc. (CBZ)	KUMMARI SUREKHA	21901
						PALLEKONDA SUDHARANI	21902
						VAGOLU PRABHU KUMAR	21903
						GAYATHRI CHIRUMALLA	21904
						GOPISETTI ASRITHA BHAVANI	21905
						KASTALA SHINE GRACE	21906
						SHAIK SANIYA	21908
						RALI BHAVANA	21909
						BOLAGANI SRAVANTHI	21910
						GAVARA YAMINI	21911
						SHAIK MOTHI	21912
						YELURI LEKHANA PRIYA	21913
						GULLA DEVI	21914
						NAIDU HARSHA VARDHANA VARMA	21915
						ABDUL NOOR AHMED	21916
						KOSURI LAKSHMI MANASA	21917
						CHUTLA SWAPNA DEEPTHI	21918
						ABDUL WAHAB	21919
						CHALLA KISHORE KUMAR	21920
						KARNATAPU SAI KEERTHI	22902
						VARADA SATYA RESHMA	22903
						MADUGULA VENKATA MAHA	22904
						KOMMINI KUVALAYA	22906
						TIRUMALASETTI ANJALI	22907
						YERUSU NIRANJANI	22908
						PAIDI MOUNIKA	22909
						NAGISETTI KALI VARAPRASAD	22910
						NAGIREDLA JAGADEESH	22911

VALUE ADDED COURSE ON FISH PATHOLOGY	AOCZ0012 5	10.03.2023 - 18.04.2023	DEPARTMENT OF ZOOLOGY	M. SAHITHI	I B.Sc. (CBZ)	GUGULOTHU GANESH	22912
						GURRAM KANTHA VALLI	22913
						PALLAPOTHU HARSHAVARDHAN	22914
						MADDALA MUTTAIAH MURALI RAJA	22915
						EGALA PRASANNA	22916
						JELDI CHAITANYA	22917
						PATHAPATI LALITHA KUMARI	22918
						BARIGE VENKATA SAI DURGA	22919
						MERUGU DAVIDRAJU	22920
						ADDANKI SAMBASIVA RAO	22921
						BANDARUPALLI SRUJANA	22922
						PASUMARTHI PUJITHA	22923
						LAKSHMI MEENAKSHI DEVI BEVARA	22924
						KATTA RAKESH BABA	22925
						CHEERLA VENKATA GOPI	22926

Total number of candidates certified in this course: **364**

Jan-Apr 2023
(12 week course)

Prof. Debjani Chakraborty
Coordinator, NPTEL
IIT Kharagpur

Indian Institute of Technology Kharagpur

Roll No: NPTEL23CY30S44914501

To validate the certificate

No. of credits recommended: 3 or 4

NPTEL Online Certification

(Funded by the MoE, Govt. of India)

This certificate is awarded to

CHANDINI

for successfully completing the course

Biochemistry

with a consolidated score of **49** %

Online Assignments	19.22/25	Proctored Exam	30/75

Add -on Programme Objectives:

To conserving environment and natural resources, re-establishing ecological balance.

To encouraging sustainable agriculture, improving soil fertility, conserving flora and fauna, increasing genetic diversity.

To put an end to chemical pollution and toxic residues.

Methodology:

- ♣ To divide the content into modules
- ♣ Each module to be explained in theory and practical

Modules to be covered:

- Module – I - ORGANIC FARMING
- Module – II - BIO DYNAMIC FARMING
- Module – III - SUSTAINABLE FARMING
- Module – IV - NATURAL SEQUENCE FARMING

For III B.Sc. (CBZ) Students

“We need more young people involved in farming because the future needs real food”

Module-1

Introduction:

Air pollution is the introduction into the atmosphere of chemicals, particulates, or biological materials that cause discomfort, disease, or death to humans, damage other living organisms such as food crops, or damage the natural environment or built environment.

A substance in the air that can be adverse to humans and the environment is known as an air pollutant. Pollutants can be in the form of solid particles, liquid droplets, or gases. In addition, they may be natural or man-made. Pollutants can be classified as primary or secondary. Usually, primary pollutants are directly produced from a process, such as ash from a volcanic eruption, the carbon monoxide gas from a motor vehicle exhaust or sulphur dioxide released from factories. Secondary pollutants are not emitted directly.

Rather, they form in the air when primary pollutants react or interact. An important example of a secondary pollutant is ground level ozone – one of the many secondary pollutants that make up photochemical smog. Some pollutants may be both primary and secondary: that is, they are both emitted directly and formed from other primary pollutants.

Module-2

Major primary pollutants produced by human activity:

Sulphur oxides (SO_x) - especially sulphur dioxide, a chemical compound with the formula SO₂. SO₂ is produced by volcanoes and in various industrial processes. Since coal and petroleum often contain sulphur compounds, their combustion generates sulfur dioxide. Further oxidation of SO₂, usually in the presence of a catalyst such as NO₂, forms H₂SO₄, and thus acid rain. This is one of the causes for concern over the environmental impact of the use of these fuels as power sources.

Nitrogen oxides (NO_x) - especially nitrogen dioxide are expelled from high temperature combustion, and are also produced naturally during thunderstorms by electric discharge. Can be seen as the brown haze dome above or plume downwind of cities. Nitrogen dioxide is the chemical compound with the formula NO₂. It is one of the several nitrogen oxides. This reddish-brown toxic gas has a characteristic sharp, biting odor. NO₂ is one of the most prominent air pollutants.

Carbon monoxide (CO) - is a colourless, odourless, non-irritating but very poisonous gas. It is a product by incomplete combustion of fuel such as natural gas, coal or wood. Vehicular exhaust is a major source of carbon monoxide.

Volatile organic compounds - VOCs are an important outdoor air pollutant. In this field they are often divided into the separate categories of methane (CH₄) and nonmethane (NMVOCs). Methane is an extremely efficient greenhouse gas which contributes to enhanced global warming. Other hydrocarbon VOCs are also significant greenhouse gases via their role in creating ozone and in prolonging the life of methane in the atmosphere, although the effect varies depending on local air quality. Within the NMVOCs, the aromatic compounds benzene, toluene and xylene are suspected carcinogens and may lead to leukemia through prolonged exposure. 1, 3-butadiene is another dangerous compound which is often associated with industrial uses.

Module-3

Particulates:

Particulates, alternatively referred to as particulate matter (PM), atmospheric particulate matter, or fine particles, are tiny particles of solid or liquid suspended in a gas. In contrast, aerosol refers to particles and the gas together. Sources of particulates can be manmade or natural. Some particulates occur naturally, originating from volcanoes, dust storms, forest and grassland fires, living vegetation, and sea spray. Human activities, such as the burning of fossil fuels in vehicles, power plants and various industrial processes also generate significant amounts of aerosols. Averaged over the globe, anthropogenic aerosols—those made by human activities – currently account for about 10 percent of the total amount of aerosols in our atmosphere. Increased levels of fine particles in the air are linked to health hazards such as heart disease, altered lung function and lung cancer.

Persistent free radicals connected to airborne fine particles could cause cardiopulmonary disease. Toxic metals, such as lead and mercury, especially their compounds.

Chlorofluorocarbons (CFCs) - harmful to the ozone layer emitted from products currently banned from use.

Ammonia (NH₃) - emitted from agricultural processes. Ammonia is a compound with the formula NH₃. It is normally encountered as a gas with a characteristic pungent odor. Ammonia, either directly or indirectly, is also a building block for the synthesis of many pharmaceuticals. Although in wide use, ammonia is both caustic and hazardous.

Odors – such as from garbage, sewage, and industrial processes

Radioactive pollutants – produced by nuclear explosions, nuclear events, war explosives, and natural processes such as the radioactive decay of radon.

Module-4

Secondary pollutants:

Particulates created from gaseous primary pollutants and compounds in photochemical smog. Smog is a kind of air pollution; the word "smog" is a portmanteau of smoke and fog. Classic smog results from large amounts of coal burning in an area caused by a mixture of smoke and sulphur dioxide. Modern smog does not usually come from coal but from vehicular and industrial emissions that are acted on in the atmosphere by ultraviolet light from the sun to form secondary pollutants that also combine with the primary emissions to form photochemical smog.

Ground level ozone (O₃) formed from NO_x and VOCs. Ozone (O₃) is a key constituent of the troposphere. It is also an important constituent of certain regions of the stratosphere commonly known as the Ozone layer. Photochemical and chemical reactions involving it drive many of the chemical processes that occur in the atmosphere by day and by night. At abnormally high concentrations brought about by human activities (largely the combustion of fossil fuel), it is a pollutant, and a constituent of smog.

MODULE-5

Causes: Factors Responsible for Air Pollution:

Air pollution can result from both human and natural actions. Natural events that pollute the air include forest fires, volcanic eruptions, wind erosion, pollen dispersal, evaporation of organic compounds and natural radioactivity. Sources of air pollution refer to the various locations, activities or factors which are responsible for the releasing of pollutants into the atmosphere.

Man-made sources mostly related to burning different kinds of fuel.

□ "Stationary Sources" include smoke stacks of power plants, manufacturing facilities (factories) and waste incinerators, as well as furnaces and other types of fuel-burning heating devices. In developing and poor countries, traditional biomass burning is the major source of air pollutants; traditional biomass includes wood, crop waste and dung.

□ "Mobile Sources" include motor vehicles, marine vessels, aircraft and the effect of sound etc.

□ Chemicals, dust and controlled burn practices in agriculture and forestry management. Controlled or prescribed burning is a technique sometimes used in forest management, farming, prairie restoration or greenhouse gas abatement. Fire is a natural part of both forest and grassland ecology and controlled fire can be a tool for foresters. Controlled burning stimulates the germination of some desirable forest trees, thus renewing the forest.

□ Fumes from paint, hair spray, varnish, aerosol sprays and other solvents.

□ Waste deposition in landfills, which generate methane. Methane is highly flammable and may form explosive mixtures with air.

□ Military, such as nuclear weapons, toxic gases, germ warfare and rocketry. Natural sources

□ Dust from natural sources, usually large areas of land with few or no vegetation.

□ Methane, emitted by the digestion of food by animals, for example cattle.

□ Radon gas from radioactive decay within the Earth's crust. Radon is a colorless, odorless, naturally occurring, radioactive noble gas that is formed from the decay of radium. It is considered to be a health hazard. Radon gas from natural sources can accumulate in buildings, especially in confined areas such as the basement and it is the second most frequent cause of lung cancer, after cigarette smoking.

□ Smoke and carbon monoxide from wildfires. □ Vegetation, in some regions, emits environmentally significant amounts of VOCs on warmer days. These VOCs react with primary anthropogenic pollutants – specifically, NO_x, SO₂, and anthropogenic organic carbon compounds – to produce a seasonal haze of secondary pollutants. □ Volcanic activity, which produce sulfur, chlorine, and ash particulates. A lack of ventilation indoors concentrates air pollution where people often spend the majority of their time. Radon (Rn) gas, a carcinogen, is exuded from the Earth in certain locations and trapped inside houses. Building materials including carpeting and plywood emit formaldehyde (H₂CO) gas. Paint and solvents give off volatile organic compounds (VOCs) as they dry. Lead paint can degenerate into dust and be inhaled. Intentional air pollution is introduced with the use of air fresheners, incense, and other scented items. Controlled wood fires in stoves and fireplaces can add significant amounts of smoke particulates into the air, inside and out. Indoor pollution fatalities may be caused by using pesticides and other chemical sprays indoors without proper ventilation. Carbon monoxide (CO) poisoning and fatalities are often caused by faulty vents and chimneys, or by the burning of charcoal indoors. Biological sources of air pollution are also found indoors, as gases and airborne particulates. Pets produce dander, people produce dust from minute skin flakes and decomposed hair, dust mites in bedding, carpeting and furniture produce enzymes and micrometre-sized fecal droppings, inhabitants emit methane, mold forms in walls and generates mycotoxins and spores, air conditioning systems can incubate Legionnaires' disease and mold, and houseplants, soil and surrounding gardens can produce pollen, dust, and mold. Indoors, the lack of air circulation allows these airborne pollutants to accumulate more than they would otherwise occur in nature.

MODULE-6

Consequences: Effects of Air Pollution

Health Effects:

Air pollution is a significant risk factor for multiple health conditions including respiratory infections, heart disease, and lung cancer, according to the WHO. The health effects caused by air pollution may include difficulty in breathing, wheezing, coughing, asthma and aggravation of existing respiratory and cardiac conditions. These effects can result in increased medication use, increased doctor or emergency room visits, more hospital admissions and premature death. The human health effects of poor air quality are far reaching, but principally affect the body's respiratory system and the cardiovascular system. Individual reactions to air pollutants depend on the type of pollutant a person is exposed to, the degree of exposure, the individual's health status and genetics.

The most common sources of air pollution include particulates, ozone, nitrogen dioxide, and sulfur dioxide. Both indoor and outdoor air pollution have caused approximately 3.3 million deaths worldwide. Children aged less than five years that live in developing countries are the most vulnerable population in terms of total deaths attributable to indoor and outdoor air pollution. The World Health Organization states that 2.4 million people die each year from causes directly attributable to air pollution, with 1.5 million of these deaths attributable to indoor air pollution.

The worst short term civilian pollution crisis in India was the 1984 Bhopal Disaster. Leaked industrial vapours from the Union Carbide factory, belonging to Union Carbide, Inc., U.S.A., killed more than 25,000 people outright and injured anywhere from 150,000 to 600,000. The United Kingdom suffered its worst air pollution event when the December 4 Great Smog of 1952 formed over London. In six days more than 4,000 died, and 8,000 more died within the following months. An accidental leak

of anthrax spores from a biological warfare laboratory in the former USSR in 1979 near Sverdlovsk is believed to

Around the world, children living in cities with high exposure to air pollutants are at increased risk of developing asthma, pneumonia and other lower respiratory infections. Because children are outdoors more and have higher minute ventilation they are more susceptible to the dangers of air pollution. Risks of low initial birth weight are also heightened in such cities.

MODULE-7

Environmental Effects:

Poisonous air pollutants (toxic chemicals in the air) can form acid rain. It can also form dangerous ground level ozone. These destroy trees, crops, farms, animals and continue to make water bodies harmful to humans and animals that live and depend on water.

Economical Effects

The effect of air pollution on the economy may be a derived one. In simple language, the economy thrives when people are healthy, and business that depends on cultivated raw materials and natural resources are running at full efficiency. Air pollution reduces agricultural crop and commercial forest yields by billions of money each year. This in addition to people staying off work for health reasons can cost the economy greatly.

MODULE-8

Control: Measures to reduce Air Pollution:

Solution efforts on pollution are always a big problem. This is why prevention interventions are always a better way of controlling air pollution. These prevention methods can either come from government (laws) or by individual actions. In many big cities, monitoring equipments have been installed at many points in the city. Authorities read them regularly to check the quality of air.

Government (or community) level prevention

- Governments throughout the world have already taken action against air pollution by introducing green energy. Some governments are investing in wind energy and solar energy, as well as other renewable energy, to minimize burning of fossil fuels, which cause heavy air pollution.
- Governments are also forcing companies to be more responsible with their manufacturing activities, so that even though they still cause pollution, they are a lot controlled.
- Companies are also building more energy efficient cars, which pollute less than before.

Individual Level Prevention

- Encourage your family to use the bus, train or bike when commuting. If we all do this, there will be fewer cars on road and less fumes.
- Use energy (light, water, boiler, kettle and fire woods) wisely. This is because lots of fossil fuels are burned to generate electricity, and so if we can cut down the use, we will also cut down the amount of pollution we create.
- Recycle and re-use things. This will minimize the dependence of producing new things. Remember manufacturing industries create a lot of pollution, so if we can re-use things like shopping plastic bags, clothing, paper and bottles, it can help.

MODULE-9

Control devices:

The following items are commonly used as pollution control devices by industry or transportation devices. They can either destroy contaminants or remove them from an exhaust stream before it is emitted into the atmosphere.

□ Mechanical collectors (dust cyclones, multi-cyclones)

□ Electrostatic precipitators: An electrostatic precipitator (ESP), or electrostatic air cleaner is a particulate collection device that removes particles from a flowing gas (such as air) using the force of an induced electrostatic charge. Electrostatic precipitators are highly efficient filtration devices that minimally impede the flow of gases through the device, and can easily remove fine particulates such as dust and smoke from the air stream.

□ Bag houses: Designed to handle heavy dust loads, a dust collector consists of a blower, dust filter, a filter-cleaning system, and a dust receptacle or dust removal system (distinguished from air cleaners which utilize disposable filters to remove the dust).

□ Particulate scrubbers: Wet scrubber is a form of pollution control technology. The term describes a variety of devices that use pollutants from a furnace flue gas or from other gas streams. In a wet scrubber, the polluted gas stream is brought into contact with the scrubbing liquid, by spraying it with the liquid, by forcing it through a pool of liquid, or by some other contact method, so as to remove the pollutants.

Some Facts and Statistics about Air Pollution

□ Air pollution affects kids more than adults due to higher concentrations of polluted air in their systems per body size.

□ India is the country with the worst air quality in the world.

□ The European Union would save 161 billion Euros a year if deaths caused by air pollution were diminished.

□ In large cities, over 80% of fatal pollutants that cause lung damage come from cars, buses, motorcycles and other vehicles on the road.

- According to the World Health Organization, there are as many deaths (1.3 million per year) in the world due to air pollution as there are deaths due to car accidents.
- The average adult breathes 3,000 gallons of air every day.
- The Great Smog of London in 1952 was one of the worst air pollution events in history with over 8,000 deaths.
- The largest cause of air pollution in Europe is road transportation with over 5,000 people dying each year from lung cancer and heart attacks caused by vehicle exhaust fumes.

MODULE-10

Ozone depletion:

consists of two related events observed since the late 1970s: a steady lowering of about four percent in the total amount of ozone in Earth's atmosphere (the ozone layer), and a much larger springtime decrease in stratospheric ozone around Earth's polar regions. The latter phenomenon is referred to as the **ozone hole**. There are also springtime polar tropospheric ozone depletion events in addition to these stratospheric events.

The main cause of ozone depletion and the ozone hole is manufactured chemicals, especially manufactured halocarbon refrigerants, solvents, propellants, and foam-blowing agents (chlorofluorocarbons (CFCs), HCFCs, halons), referred to as ozone-depleting substances (ODS). These compounds are transported into the stratosphere by turbulent mixing after being emitted from the surface, mixing much faster than the molecules can settle. Once in the stratosphere, they release atoms from the halogen group through photodissociation, which catalyze the breakdown of ozone (O_3) into oxygen (O_2). Both types of ozone depletion were observed to increase as emissions of halocarbons increased.

Ozone depletion and the ozone hole have generated worldwide concern over increased cancer risks and other negative effects. The ozone layer prevents most harmful wavelengths of ultraviolet (UV) light from passing through the Earth's atmosphere. These wavelengths cause skin cancer, sunburn, permanent blindness, and cataracts, which were projected to increase dramatically as a result of thinning ozone, as well as harming plants and animals. These concerns led to the adoption of the Montreal Protocol in 1987, which bans the production of CFCs, halons, and other ozone-depleting chemicals.

The ban came into effect in 1989. Ozone levels stabilized by the mid-1990s and began to recover in the 2000s, as the shifting of the jet stream in the southern hemisphere towards the south pole has stopped and might even be reversing. Recovery is projected to continue over the next century, and the ozone hole is expected to reach pre-1980 levels by around 2075. In 2019, NASA reported that the ozone hole was the smallest ever since it was first discovered in 1982.

Kan

Question paper and Key

1. Which of the following pollutants are responsible for the cause of SMOG?
- (a) From incinerators (b) Emissions from vehicles
(c) Both incinerators and emissions from vehicles (d) None of the above (c)
2. Which of the following is called the secondary air pollutant?
- (a) PANs (b) Ozone (c) Carbon monoxide (d) Nitrogen Dioxide (b)
3. Which of the following particles is called the particulate pollutants?
- (a) Ozone (b) Radon (c) Fly Ash (d) Ethylene (c)
4. Which of the following agents is responsible for turning the Taj Mahal yellow?
- (a) Sulphur (b) Chlorine (c) Sulphur dioxide (d) Nitrogen dioxide (c)
5. What type of precautions should be taken to survive when the ozone level is high?
- (a) Drive less (b) Stay hydrated (c) Both A and B (d) Go for a long walk (c)
6. Which of the following statements is true about SMOG?
- (a) SMOG is derived from the fog
(b) SMOG is derived from smoke
(c) SMOG is derived from water vapour
(d) SMOG is derived from both fog and smoke (d)
7. Which of the following statements is true about the Air Quality Index?
- (a) It indicates the colour of the air.
(b) It predicts ozone levels in your area.
(c) It determines the intensity of sound and sound pollution.
(d) It estimates air pollution mainly sulphur content in the air. (d)
8. The major photochemical smog is _____.
- (a) Hydrogen peroxide (b) Chlorofluorocarbon
(c) Peroxyacetyl nitrate (d) All of the above (b)
9. Which of the following diseases are caused by smog?
- (a) Rickets (b) Bronchitis (c) Breathing Problems (d) All of the above (d)
10. How many different types of primary pollutants together contribute about 90 per cent of the global air pollution?

- (a) Three (b) Five (c) Seven (d) None of the above (b)

11. Which of the following agents is mainly responsible for the secondary pollutants?

- (a) Smog and Ozone (b) Sulphur dioxide
(c) Nitrogen dioxide (d) All of the above (d)

12. Smoke, fumes, ash, dust, nitric oxide and sulphur dioxide are the main sources of _____

- (a) Primary Pollutants (b) Secondary pollutants
(c) Bio-Degradable Pollutants (d) None of the above (a)

13. Which of the following industries plays a major role in polluting air and increasing air pollution?

- (a) Brick manufacturing industries
(b) Manufacture of gases industries
(c) Electrical appliances and electrical goods industries
(d) All of the above (d)

14. Which of the following gas is more in percentage in the air?

- (a) Oxygen gas (b) Nitrogen gas
(c) Water vapour (d) Carbon dioxide gas (b)

15. Increased levels of air pollution results in _____.

- (a) Soil erosion (b) Global warming
(c) Respiratory problems (d) All of the above (c)

16. The Taj Mahal, Lotus Temple, Golden Temple, India Gate and other famous heritage monuments are being affected by _____.

- (a) Air pollution (b) Water pollution
(c) Noise pollution (d) All of the above (a)

17. Which of the following gases are called Green house gases?

- (a) Methane (b) Nitrogen (c) Carbon dioxide (d) Both a and c (d)

18. What is the total percentage of nitrogen gas in the air?

- (a) 12 per cent (b) 21 per cent (c) 78 per cent
(d) 87 per cent (c)

19. The maximum size of fly ash is _____

- (a) 1 μ m (b) 100 μ m (c) 1000 μ m (d) 10 μ m (c)

20. According to EPA of USA the following is not one of the six major pollutants?
