## **Separation Methods**

Many of the materials around us are mixtures. These mixtures have two or more substances mixed in them. It may not be possible to use a mixture as such in homes and industries. Different substances in a mixture possess different properties like size, hardness, density, solubility, texture, weight, etc. These differences in their physical properties are used to separate them from a mixture.

Depending on the type of mixture, different methods of separation are used. Some of the common methods of separation are;

1. Filtration
2. Hand-picking
3. Threshing
4. Winnowing
5. Sieving
6. Sedimentation and decantation
7. Magnetic separation
8. Centrifugation
9. Evaporation
10. Distillation

### **Filtration**

Filtration is the process of separating insoluble solids from a liquid mixture by using a filter. The filter could be in the form of a strainer, a sieve, a muslin cloth or filter paper.

### **Filtration Process**

The insoluble solid mixture and the liquid are poured into a filter paper cone fixed in a funnel by using a glass rod as a guide. The liquid flows through the filter paper and collects in the beaker beneath the funnel. Solid particles do not pass through the filter paper and remain on it. The solid substance left behind on the filter paper is called the residue. The clear liquid obtained is called filtrate. In this way, a mixture of insoluble solids in a liquid is separated into a solid and clear liquid.

## Applications of Filtration

When boiling tea is poured over a strainer, the tea leaves remain in the strainer and tea gets collected in the cup below. This process of separation of tea leaves from the prepared tea is called filtration. In this, the strainer acts as a filter.

A mixture of chalk and water is separated by filtration. When a mixture of chalk and water is poured on the filter paper fixed in a funnel, then clear water passes through the filter paper and collects as filtrate.

A mixture of sand and water can also be separated by filtration.

Filtration is also used for separating paneer.

Fruit pulp and seeds can be separated from the fruit juice by using a sieve.

For lab experiments, filter paper is used as a filter.

## **Hand-picking**

Hand-picking means taking it out by hand. Hand-picking is a method of manually separating small substances visible to the naked eye from a mixture. It is used to separate substances that differ in size, shape, or colour and that can be picked up by hand because they are typically present in small quantities.

For example, the hand-picking method is used to separate small stones from food grains like pulses, rice and wheat. The pieces of stone are picked up from the food grains by hand and thrown away.

## **Threshing**

Threshing is the process in which stalks (such as stalks of wheat, paddy, etc.) are beaten to separate grains from the stalks and from the chaff that covers the grains. The separation method is based on the fact that crop plant stalks and chaff are soft materials, whereas grains are extremely hard. Because stalk and chaff are soft, they can be broken into pieces when beaten, but the grains are unaffected.

Threshing is accomplished by holding bundles of stalks in your hands and hitting them against a hard surface. Threshing is accomplished with the assistance of bullocks or a machine known as a thresher.

## **Winnowing**

Winnowing is the method of separating heavier and lighter components of a mixture with the help of wind or blowing air.

In this process, a mixture of grain and husk is made to fall from a height with the wind blowing over it. The husk, being lighter, blows away and forms a heap some distance away. The heavier grains fall to the ground and form a separate heap.

## **Applications of Winnowing**

The winnowing method is used to separate the husk from various types of grains like wheat, rice, etc.

Winnowing can be used to separate sand from sawdust or sand from dried leaves. Sawdust and dried leaves being lighter get blown away by wind and form a separate heap at a distance.

## **Sieving**

Sieving is a method of separating substances of different sizes using a sieve. A sieve is a type of strainer that consists of a fine iron mesh attached to a

wooden or iron frame. The sieves could be of different sizes depending on the size of the substances to be separated. Sieving is used to separate substances that cannot be easily hand-picked due to their small size or presence in large quantities.

In the separation of substances by sieving, the mixture is placed in a sieve and the sieve is continuously moved back and forth. Smaller and finer particles pass through the holes on the sieve and can be collected below, while larger particles remain in the sieve.

### **Applications of Sieving**

The flour that we get from the flour mill has some bran mixed in a fine flour. Sieving is used to separate the bran from fine flour.

We require fine sand to be mixed with cement before plastering the walls of a house. The sieving method is used to obtain fine sand.

### **Sedimentation and Decantation**

The Sedimentation and Decantation process has been explained in detail below:

#### **Sedimentation**

Sedimentation is the process of settling down of heavier solids in water when the mixture is allowed to stand undisturbed for some time. It is used to separate insoluble solids from a solid-liquid mixture. For example, rice and pulses commonly contain small stones and dust particles. Water is added to the pulses after small stones are removed by hand. The heavier pulses settle

## Magnetic Separation

Magnetic separation means 'separation of a mixture by using a magnet'. We know that a magnet attracts iron. This property of iron is used to separate it from a mixture. For example, a magnet can be used to separate a mixture of iron filings and sulphur powder. This is because iron filings are magnetically attracted, whereas sulphur powder is not.

## Evaporation

The changing of a liquid into vapour is called evaporation. Evaporation is used to obtain a solid substance that has dissolved in water. Although evaporation takes place at room temperature, it is much faster when the water is heated.

When the mixture is heated till all the water evaporates in the air, only the dissolved substance is left behind as a solid residue. For example, the common salt dissolved in water can be separated by the process of evaporation. The process involved is as follows:

In a porcelain dish, a solution of common salt and water is gently heated using a burner. The water present in the salt solution will form water vapours and escape into the atmosphere. When all of the water in the common salt solution evaporates, the common salt is left in the porcelain dish as a white solid.

down, while water with dissolved impurities from the upper layer rises. This is referred to as sedimentation. The pulses that settle at the bottom are called sediments.

## Decantation

Decantation is a process of pouring out the top layer of liquid into a separate container leaving behind the solid particles or sediments at the bottom.

For example,

1. In cleaning rice and pulses, the pouring out of dirty water containing impurities is called decantation.
2. Decantation is also used to separate water after boiling the vegetables.

## Distillation

Distillation is the process of heating water to form water vapour and then cooling the hot water to get back liquid water. Distillation can be represented as;

Water(Liquid)  $\xrightarrow{\text{Cooling}}$  Heating Water vapour(or steam)  $\xrightarrow{\text{Cooling}}$  Water(Liquid)  $\xrightarrow{\text{Heating}}$  Water vapour(or steam)

The changing of water into water vapour on heating is called evaporation. And the changing back of hot water vapour into liquid water on cooling is called condensation. Thus, distillation involves two processes: evaporation followed by condensation.

## Centrifugation/Churning

It is a method of separating the lighter substances from the heavier ones by churning or rotating the mixture quickly. It is a common method at home to separate butter from the cream. The cream is churned at high speed. On churning, the butter particles separate and being lighter, come on top of the liquid.

## E and Z Notation for Alkenes

### E and Z Notation for Alkenes

- Unlike C–C single bonds, C–C double bonds can't undergo rotation without breaking the pi bond
- One consequence of this is geometric isomerism – the existence of alkene stereoisomers that differ solely in how their substituents are arranged in space about the double bond
- In simple cases where there are two identical substituents on each carbon of the alkene, we can use cis– and trans– to designate the isomers where those substituents are on the same and opposite sides of the double bond, respectively.
- For geometric isomers that lack two identical substituents, we rank the two substituents on each end of the double bond according to the Cahn-Ingold-Prelog (CIP) rules.
- The Z isomer (“zusammen“, same) is the geometric isomer where the #1 ranked substituents are on the same side of the double bond. Mnemonic: “zee zame zide”
- E isomer (“*entgegen*“) is the geometric isomer where the #1 ranked substituents are on the opposite side of the double bond,

When each carbon in a double bond is attached to a hydrogen and a non-hydrogen substituent, the geometric isomers can be identified by using the cis-trans nomenclature discussed in the previous section.

However, when a double bond is attached to three or four non-hydrogen substituents there are some examples where cis-trans nomenclature is ineffective in describing the substituents orientation in geometric isomers.

In these situations the rigorous IUPAC system for naming alkene isomers, called the E/Z system, is used.

The E/Z system analyzes the two substituents attached to each carbon in the double bond and assigns each either a high or low priority.

If the higher priority group on both carbons in the double bond the same side the alkene is said to have a Z isomer (from German *zusammen* = together). You could think of Z as Zame Zide to help memorize it. If the higher priority gr

oup on opposite sides the alkene has an E isomer (from German entgegen = opposite).

**Z Configuration**

High priority substituents are on the same side of the double bond

**E Configuration**

## THE IMPACT OF SOCIAL MEDIA ON OUR LIVES

A.Sai Kumar said: Hey Everyone,

Social Networking sites are an integral part of the digital revolution. We all live in an era where we want information (academic, factual, personal) at our fingertips. Social networking sites not only serve as a medium to share resources but have transformed over a decade in boosting the economy.

With the advent of social networking sites, the life of humans has been revolutionized.

1. Social media has helped to increase awareness about their surroundings, and academics and also has directly stimulated the decision-making ability of individuals.
2. Social networking sites have also made it easier to remain connected with friends, family and loved ones. It has also made it easier to find a partner.
3. Social networking sites have provided individuals to voice their thoughts.
4. Social networking sites have provided platform support to emerging businesses for marketing and supply chain purposes.
5. Social networking sites have also had an influence on the political fate of the country and have also been a platform to solve grievances.

As the use of networking sites is mostly free, there are some potential challenges that need to be addressed on both individual and organizational levels.

1. Addiction towards usage of networking sites- this can be addressed by using application timers and self-discipline.
2. Breach of personal data- Social Networking sites collect a lot of personal data. A proper understanding of authorization requests may prevent a lot of personal data from being shared. 100 per cent data privacy still remains a challenge.
3. Use of networking sites to perpetuate false information or plot a nefarious activity- This can be controlled by continuous surveillance of the traffic by cyber authorities and application merchants. Blocking DNS or restricting IP addresses may be useful in these cases.

I personally believe that the more responsible we become to ourselves and our society the more we can address challenges and we can together reap the fruits of any new technology or invention together.

K.Gopi said:

Social Networking Site:- An endless topic to debate on. Well, we all share similar opinion/thoughts to an extent on the said topic & Here is mine-.

Social Networking- As the name clarifies itself, to connect with society, not in a physical way, but in a digital way. Ever since social platforms were created, it has really created another level of excitement among millions in every field whether it is education, entertainment, sports, or whatever. These platforms have now become a different medium of learning, getting entertained, etc.

But as we all know that every coin has its two sides and everything in this world has its pros & cons that define its origin. We "Humans" also even have pros & cons. If we have well in ourselves then we also have bad at the same time and that defines us.

These social platforms can either make someone popular overnight or it can destroy them forever.

K.Harshitha said: Good morning all of you

According to me, there is both positive and negative impact of social media. There are many platforms on social media that can be used for learning, earning, etc. Because of this we can easily access information about all things; we can also stay in touch with friends, families, or relatives. This is a positive impact.

But everything has two side's one positive & the second negative. So, it has also some negative impacts. Peoples are addicted to social media which badly effect on their life, I.e. there is a communication gap between people, many cyber threats, health issues, depression, & many more.

So Here, I am concluded that the use of social media is fully dependent on us then it is good or bad according to use.

Sk.Jainab said: Hello to all.

In my point of view, there is good and bad impacts are there from social networking sites because there is thing which is good or bad that is only on ours which means on the user's hands.

Take an example from this site is we are learning and building new skills that are a good impact but some are spreading negativity that is a bad impact. So my final conclusion is good or bad it is on user handling way.

**CELEBRATIONS**  
**28<sup>th</sup> February, 2022**

**ORGANIZED BY**  
**SCIENCE DEPARTMENTS**

On the occasion of National Science Day, all the Science Departments (Chemistry, Physics, Botany and Zoology) conducted Science day celebrations in our college as **Science for School Children - A practical Exposure to School Children on 28<sup>th</sup> February 2022**. On that day Science projects exhibition for high school students was conducted. Nearly 2000 Students from various schools in and around KBN College participated actively in the exhibition with great enthusiasm. Science day celebrations started with the inaugural session on 22nd Feb 2022 with the lighting of the lamp and paying homage to Sir C.V.Raman by the Chief Guest Prof. K.S. Jagannadha Rao, Pro Vice-Chancellor, K.L. University, Guntur. 200 students and science faculty of our college and science teachers from various schools attended the gathering. Our college principal Dr.V. Narayana Rao presided over the session and gave a brief introduction about the significance of celebrating National Science Day on 28th February and the importance of '**Integrated Approach in science and technology for Sustainable Future**' as this year focal theme. The Chief Guest , gave a special talk on science and technology for sustainable environment. He also explained about the research opportunities for women in science. Women science faculty of our college involved in research activities gave special talk on Functioning of Human Brain and encouraged students to take up career in scientific research. He interacted actively with the chief guest and he clarified the doubts raised by the school children with a great patience. The students from various science departments of our college also exhibited working models and projects for two days. The grand success of this science day celebrations is due to the active role played by the organizing committee members and the team work of the ever-supporting staff and students of this college Inspired by the feeling of Sir C.V Raman. KBN College always devote to generate scientific temper in the society and encourage the students to take up science as their future.

## REPORT

KBN College, organized Science Expo -2019 from 21<sup>st</sup> to 23<sup>rd</sup> August, 2019 to all departments of the college wherein students showcased working models which can be used for learning various scientific concepts. The objective was not only to inculcate a scientific attitude and research-mindedness but also creating teaching aids. It involves students to participate in activities so as to understand the cognitive, affective and psychomotor aspects of the task.

This science expo created a platform to show the student hidden talents. Sri Velampalli Srinivas, Hon'ble Minister for Endowments, AP inaugurated the expo. Nearly 18 school students visited the college in these days. The following departments are participated in the science expo- 2019:

1. Department of Telugu
2. Department of English

3. Department of Hindi
4. Department of Botany
5. Department of Zoology
6. Department of Physics & Electronics
7. Department of Chemistry
8. Department of Computer Science & Applications
9. Department of Commerce
10. Consumer Club

# Three-day science expo inaugurated

HANS NEWS SERVICE

**Vijayawada:** Minister for Endowments Vellampalli Srinivas said that new innovations can be found only if the students improve their creative skills.

The minister inaugurated the three-day Science Expo organised by KBN College here on Wednesday.

Addressing the gathering, he said that the world was experiencing advanced technical innovations and the students should acquire knowledge needed for their overall development from them. The present generation should come up with new inventions keeping in mind the pollution, natural calamities, human needs and others things. He said apart from the academics, the students should excel in the field related to their courses. Human development was possible only with science and knowledge by thinking out of the box, said the minister and added that all the exhibits in the exhibition are scientific.

The minister said that students should excel in their creative
